IDENTIFIERS *California

ABSTRACT

The first of a series of statewide student profiles, this report summarizes data characterizing the 1,042,496 students enrolled in credit courses at the California community colleges during the first census week of Fall 1979. The data, presented on a series of tables, are broken down and cross-tabulated by age, enrollment status, full-time/part-time status, geographic region, race, residency, sex, student level, units attempted, and veteran status. Major findings indicate that most students (65.5%) were freshmen, that females outnumbered males by 9%, and that the median age was 25 years. The ethnic/racial distributions indicate that 71.5% of the students were Caucasian, 10.9% were Hispanic, 9.7% were Black, 5.2% were Asian, 1.5% were American Indian, and 1.2% were Filipino. The highest concentration of non-white students occurred in the Los Angeles area, and the lowest concentration was found in the northern part of the state. Only 25% of the students carried a full-time load, and 50% carried less than six units. Similar variations in the proportion of students enrolled for 12 units or more occurred across racial, regional, and age variables. (JP)

PREFACE

This is the first of a series of general profiles on students, aggregating data for seven regions of the state along with a statewide profile. This report describes students enrolled in credit courses during the first census week of Fall 1979. Future profiles describing each fall's enrollment will be issued early the following spring.

Data in this report are derived from the student file within the Chancellor's Office Information System. Additional data elements and/or analyses by districts, and in most cases, colleges, can be made available on request.

Tom Tanner and Wendy Payton of the Analytical Studies Unit prepared this report with the assistance of the Chancellor's Office Research and Analysis Committee. We invite your comments and suggestions on ways this document may be improved in the future.

GEOGRAPHIC REGIONS*

*Regions follow community college district boundaries. For the districts in each region, please see page 12.

INTRODUCTION

PURPOSE

This is the first of a series of Student Profiles intended to provide general aggregated descriptive statistics of California Community College students. This volume is one of a set of three wherein a statewide profile and regional profiles for each of seven regions are described for those students enrolled in credit courses the first census week in Fall 1979.

Other profiles planned for the future include:

(a) highlights of special community college clienteles that are new, unique or otherwise of special interest;

(b) comparisons of California Community College students with enrollees at two-year institutions in other states and with students enrolled in other segments of higher education in California; and

(c) time series comparisons of community college enrollment.

TIMING

These general statewide and regional profiles are planned as annual publications to be released early each spring, concentrating on the previous fall enrollment.

Profiles of special clienteles will be published as studies are conducted in response to pertinent topics before the Legislature or Board of Governors and as time and resources permit.

National and intersegmental profiles are planned every two or three years as significant shifts appear in the demographics of students enrolled in higher education.

Time series comparisons will be published as resources allow.

DATA SOURCES

These data on California Community College students are supplied by local community college districts and represent the credit enrollment situation as of the first census week of the Fall 1979 term. Credit students attending only short term classes beginning after the first

census week are not included. Credit students attending during the first census week and subsequently dropping some or all of their classes are included in the data and considered to be carrying the class load of record at first census week.

Total enrollment for Fall 1979 in the California Community Colleges was 1,248,459. Students enrolled exclusively in noncredit classes and not included in these profiles accounted for 147,778 of this total. An additional 58,185 students enrolled in credit classes are not included in the profiles due to data reporting errors and a variety of complications not resolved at the time the profiles were prepared. All of the tables are based on the remaining 1,042,496 Fall 1979 enrollees.

Summary statistics of these data have been reviewed and approved as accurate by the reporting districts. The data are public information and may be obtained at cost in machine readable form by contacting the Analytical Studies Unit, California Community Colleges, 1238 "S" Street, Sacramento, CA 95814, (916) 322-4656. Data collection specifications and definitions and the file formats are described in "Uniform Statewide Reporting System, California Community Colleges" March 1980, also available from the Analytical Studies Unit.

REGIONS

The seventy community college districts have been grouped into seven geographic regions roughly approximating natural, economic or travel regions in the state and coincident with the geographic boundaries of the community college districts included in each region.

No significance other than geographic proximity is implied in the regional groupings. Data for individual districts and, in most cases, by college are available upon request.

ADDITIONAL DATA ITEMS

These profiles present only part of the data collected about community college students. The available data files contain several data elements which have not been included in this series due mainly to limited space and budget. Further, many of the tables which have been included present the data in grouped form. The original data in many instances is stored at a much more detailed level and could be used to profile and study more exclusive subpopulations.

Interested parties should contact Analytical Studies with suggestions for the inclusion of other cross-tabulations in future reports.

FALL 1979 HIGHLIGHTS

PRIOR EDUCATIONAL EXPERIENCE

Of each one hundred credit students enrolled in the Fall 1979, 65 were freshmen, 15 had completed 30 - 59 semester units, 6 had completed 60 or more semester units, 4 had an AA degree, and 8 had attained a BA or higher degree.

The concentration of freshmen was the highest in the Los Angeles region (69%) and the lowest in the Bay Area (59%). The concentration of students with a baccalaureate degree ranged from 6% in the Los Angeles area to 13% in the Bay Area.

The Coastal region enrolled the highest proportion of high school students (4%) and was second only to the much larger Los Angeles region in terms of the number of high school students attending community colleges (See Tables 3,30.)

STUDENT GENDER

In all regions of the state, female students outnumbered male students. Statewide, 54.5% were women and 45.5% men. The lowest proportion of men occurred in the northern California region where 43% were men. The highest proportion of men was found in the San Diego region with 49% males. Men outnumbered women slightly in the full-time enrollment, 51% to 49%. Among foreign students, however, men outnumbered women by more than 2 to 1. (See Tables 11, 31.)

STUDENT AGE

The median age of community college students in Fall 1979 was 25 years.

Twenty-two percent were under 20 years of age, 49% were under 25, 65% were under 30, 83% were under 40, 92% were under 50, and 97% were under 60. Put differently, just over one-third of all students enrolled for credit were over thirty years-of-age. (See Tables 4, 34.)

STUDENT RACIAL/ETHNIC DISTRIBUTION

Seventy-one and one-half percent of the Fall 1979 credit enrollment was identified as white caucasian. This percentage is roughly the same as the percentage of white caucasians in the California adult population.

The 28.5% non-white enrollment was comprised of 1.5% American Indian, 5.2% Asian, 9.7% black, 10.9% Hispanic and 1.2% Filipino.

The highest concentration of non-white students occurred in the Los Angeles region, and the lowest concentration in the northern California region.

The highest concentration for each racial/ethnic group was found in the following regions:

a.	American Indian	Northern California	3.1%
b.	Asian	Bay Area	8.0%
c.	Black	Los Angeles	12.1%
d.	White	Northern California	89.8%
e.	Hispanic	Desert	23.1%
f.	Filipino	Coastal	1.6%

The lowest concentrations occurred in:

a.	American Indian	San Diego	1.1%
b.	Asian	Desert	1.3%
c.	Black	Northern California	1.5%
d	White	Los Angeles	66.8%
e.	Hispanic	Northern California	4.0%
f.	Filipino	Northern California	0.2%

(See Tables 17, 21, and 32.)

STUDENT LOAD

One-fourth of the community college students carry a full-time load (12 units or more), one-fourth carry 6 to 11 units and one-half carry less than six. Three to six units attempted is the most common load for all types of students except for those receiving veterans benefits and foreign students, both of which enroll predominantly on a full-time basis.

The proportion of students enrolled for 12 units or more varies considerably by racial/ethnic classification. Asians show the highest percentage of full-timeness (35%), followed by blacks (31%), Hispanics (30%), Filipino (29%), American Indians (26%), and Whites (24%).

Similar variation in full-time load is seen across regions with the Central Valley showing 31% full-time, Coastal and Desert regions at 29%, Northern California at 27%, the Bay Area and Los Angeles at 25% and San Diego at 23%.

The most striking variation of units attempted occurs across age groups. Fifty-seven percent of 18 year-olds, 54% of 19 year-olds, and 31% of 20 to 24 year-olds carry 12 or more units. The percent attending full-time drops steadily, from 16% in the 25 to 29 year age group to 6% or less among those 50 years of age and older.

TABLE STRUCTURE

Table 25 is reproduced here as an example of the structure of all of the tables.

Each table is a cross-tabulation of two variables with the values for one variable appearing across the top and the values for the other variable appearing down the left side. Each cell of the table contains the frequency, or count, of the students with the characteristics of both the row and column values. For example, in the sample table, 136,136 students were male and full-time.

In addition to the frequency, each cell contains (a) the overall percent (136,136 is 13.21% of 1,030,248); (b) the row percent (136,136 is 29.03% of 486,985); and (c) the column percent (136,136 is 51.34% of 256,152).

Most tables will also contain a row and/or column with a "." as the value and no entries for the percentages. The counts in these rows and columns are for cases in the data files with unknown or invalid data. For example, 1,540 full-time students were not coded with a proper sex code.

The counts for these unknown cases are not included in the row, column or overall totals or percentages.

SPECIAL COMMENTS

1. All tables showing the age distribution appear on two pages.

2. 4,426 cases had invalid units attempted. The 4,426 cases have been included in the part-time counts in all tables showing "Full-Time/Part-Time Status." Other characteristics of these 4,426 cases suggest that they are more likely part-time than full-time.

3. Student residency is displayed as (a) "District" for district residents attending in their district, (b) "Foreign" for non-state residents, and (c) "Others" for non-district territory residents and residents of one district attending in another district.
